DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-19, drawn to a method of plasma processing, classified in class 216, subclass 67.
 - II. Claims 20-47, drawn to a plasma processing system, classified in class 156, subclass 345.44.
 - III. Claims 48 and 49, drawn to a plasma processing control system, classified in class 156, subclass 345.28.
2. The inventions are distinct, each from the other because of the following reasons:
 - a. Invention I and Inventions II and III are related as process and apparatuses for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed in Invention II could be used to practice another and materially different process, such as igniting a plasma without using a second RF signal to sustain the plasma. The apparatus as claimed in Invention III could be used to practice another and materially different process, such as controlling remote plasma generation.
 - b. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the

Art Unit: 1763

combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the control system required by the combination could comprise only means for initializing the system and supplying a first signal at a first RF frequency. The subcombination has separate utility such as a control system for remote plasma generation.

3. Because these inventions are distinct for the reasons given above and the search required for any one group is not required for the other two groups, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Thomas Moretto on 04/20/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
